

**New! Bladeless!!**

# LASER

ASSISTED REFRACTIVE

# CATARACT SURGERY

## Your wait is over!

We are proud to be the **FIRST** and **ONLY** practice in Central Florida to offer **bladeless Laser Assisted Refractive Cataract Surgery!**

Enjoy the benefits of bladeless, computer-guided laser surgery. This technologically advanced alternative to manual cataract surgery begins a new era of cataract surgery innovation. You can now relax knowing that most of the important steps of cataract surgery are performed without blades and with unsurpassed precision!

### What is **bladeless Laser Assisted Refractive Cataract Surgery?**

Standard, manual cataract surgery is a complex surgical procedure with an excellent track record for safety. Even in the best of hands there is some variability in how each step is performed. This is one of the main reasons why following standard cataract surgery, the majority of patients still need glasses for some or all activities.

With **bladeless Laser Assisted Refractive Cataract Surgery** many of the most challenging steps of cataract surgery are automated and performed with a laser. After a 3-D scan of your eye, a customized surgical plan is designed by the surgeon on a computer screen. Once all the specifications are programmed, the computer guides the laser to perform each step. The laser can reduce astigmatism and allows for a more precise placement of the lens implant. The result? Optimized vision without glasses!

### What is the advantage of **bladeless Laser Assisted Refractive Cataract Surgery?**

Our patients are excited about the possibility of better vision without glasses after cataract surgery. They are also more relaxed knowing that **NO BLADES** are used. A computer-guided laser precisely performs most the important steps of cataract surgery.

### Who is a good candidate for **bladeless Laser Assisted Refractive Cataract Surgery?**

Good news!

Almost everybody qualifies for this wonderful new advancement.

### What is next?

**Bladeless Laser Assisted Refractive Cataract Surgery** is part of our **CLEAR UPGRADE**. **CLEAR UPGRADE** is a comprehensive set of additional services and procedures before, during and after cataract surgery resulting in best possible vision without glasses. Some of those additional services include specialized testing, doctor consultations and examinations, **bladeless Laser Assisted Refractive Cataract Surgery**, access to premium lens implants and refractive surgeries such as LASIK.

If you want to see with little or no glasses after cataract surgery, say **"YES!"** to **CLEAR UPGRADE**.

With **bladeless Laser Assisted Refractive Cataract Surgery** the future of cataract surgery is here...

Konrad Filutowski, MD with  
LenSx® Laser

*"I am thrilled to be first in our area to offer my patients laser technology for cataract surgery. It gives my patients a new feeling of confidence and comfort. I believe that CLEAR UPGRADE with bladeless Laser Assisted Refractive Cataract Surgery has the potential to give my patients the best possible vision."*
